Introducing the 4"x 8" VAST Composite Landscape Paver

Award-winning VAST, Composite Landscape Pavers - manufactured in VAST's advanced composite material made from recycled rubber and plastics - are now available in the size most preferred by architects, builders and contractors.

"The 4x8-inch size is the paver I want for big projects. Larger pavers have more visual appeal in bigger applications and are more efficient to install." says Mark Burzynski, [Gulf Coast Landscape Services](#), Houston, Texas.

Pound Ridge Golf Course Finds Green Alternative for New Patio

Location:
 Pound Ridge, NY

Project:
 Patio
 1,500 Sq Ft

Solution:
 VAST Composite Permeable Pavers

Date:
 Fall 2009

Flowing streams and adjacent wetlands are fundamental natural features of Pound Ridge, and the golf club has a stormwater management plan to safeguard water quality. Protecting water quality by controlling the volume and velocity of rain runoff is a central concern to Pound Ridge in the prevention of erosion and water pollution. So when Pound Ridge planned a new patio, they decided on a permeable installation. They chose VAST Composite

Permeable Pavers. They look like traditional brick pavers and complement the signature rock walls at Pound Ridge. With infiltration rate of more than 400 inches per hour (when installed on an open-graded base), VAST permeable pavers are designed for applications like the patio. The material is also slip resistant and low maintenance. As an extra bonus, the VAST material is green.

→ About VAST

VAST helps projects earn LEED® certification easier than any other pavement. By not manufacturing with concrete, we've saved: 3,000,000 pounds of scrap tires and plastics from entering U.S. landfills, 69,000 gallons of water (over 41,000 toilet flushes), enough energy to heat 630 homes for one year, and prevented over 5,000 tons of CO2 from being emitted to date (same as removing 875 cars from the road, permanently). Tomorrow? The Future is VAST™.
